

## **Bioclear Method Course: Levels I & II – 2 Days**

This course is designed for all dentists who wish to increase their skills in modern techniques for successful composite restorations. The Bioclear Method offers a unique and cutting edge alternative to traditional direct composite restorations. It introduces the use of 'injection molding' composite placement techniques with the use of the anatomic David Clark matrix system.

The two-day hands-on dental training in the Bioclear International Learning Centre (Smile Concepts, Solihull):

Level I: Course on injection molding technique for modern anterior composite dentistry

Level II: Course on injection molding technique for modern posterior composite dentistry.

On completion of the course, the dentist can become a certified Level I & II Bioclear practitioner, and be included in the international database for approved Bioclear practitioners.

### Course Overview:

- Bioclear background and method
- Basics of the David Clark matrix
- Rubber dam isolation
- Heating of composite materials
- Biofilm removal
- Clark Class III cavity design with radius/infinity margin
- Clark Matrix selection and adaptation
- Injection molding for Class III restorations
- Clark 3-step Polish technique
- Black triangle closure/treatment
- Reshaping undersized teeth
- Treatment of peg laterals
- Aesthetic diastema closure
- Prevention of white lines or visible margins in composites
- New science of strong posterior restorations and teeth
- Clark Class II restoration with injection molding
- Composite overlay restoration
